French basic

education

- 09/14–06/15 **M.Sc.** Human-Computer Interaction and Social Media Umeå universitet, Sweden
My thesis is about embodied interaction. A combination of eye-tracking and speech recognition in order to control a system. The goal is to remove physical artifacts from a user's perception.
- 2008–2012 **B.Sc.** Computer Science Hochschule für Technik Stuttgart, Germany
My thesis was about an innovative real-time based residential power scheduling scheme for smart grids. The implementation was done in JAVA.

experience

- 2013–2014 **Verivox GmbH** Heidelberg, Germany
Software systems engineer
As part of a multicultural scrum team, I helped to maintain and improve Germany's best and most popular comparison website of the years 2012, 2013 and 2014. We worked closely together with the UX team. Together we attended sprint kickoffs, daily scrum meetings, retrospectives, general project planning or were supporting each other in daily business tasks. We developed using C#, ASP.NET MVC, JavaScript(jQuery), HTML, CSS, Visual Studio and Subversion. We applied techniques like test-driven development, MVC, inversion of control, dependency injection, unobtrusive JavaScript, REST and AJAX.
- 2012–2013 **Thales Deutschland GmbH** Stuttgart, Germany
Software engineer
One part of my work was to improve an already existing internal software tool. The work involved VBA, XML as well as Subversion. Contextual inquiry was applied in order to improve the user experience and user interface. I describe my role as in-house support for the users as well as maintenance and improvement of the software tool.
The other part of my work involved working in a scrum team. We developed a completely new internal tool using C#, AutoCAD .NET, WPF, MVVM, Visual Studio and Subversion. The work involved creating the user interface, specifying the system architecture as well as implementing and testing.
- 2011–2012 **Bombardier Transportation GmbH** Mannheim, Germany
Working student - System architecture
My work involved assisting a system architect in daily business tasks. I created UML diagrams with Enterprise Architect and was administrating a Linux server as well as a MySQL database.
- 2010–2011 **IBM Deutschland Research & Development GmbH** Böblingen, Germany
Intern - Quality assurance
I was part of an international team. I developed and validated functional and regression tests for IBM DB2 and IBM DB2 Optim Performance Manager. The tests were created with the help of JAVA, IBM Rational Functional Tester and an internal IBM DB2 SQL query workload tool.

skills

Agile	Scrum, Kanban
Database	Querying, modelling and configuring
Design	Human-centered, Personas, Scenarios, Evaluations, Wireframes, Rapid prototyping, Lo-Fi and Hi-Fi prototypes, Questionnaires, Interviews, Contextual Inquiry, Designing with blends
Hardware	Arduino
Object	Object oriented analysis, design and programming
OS	Mac OS X, Windows, Linux
Programming	JavaScript(Angular, jQuery, Processing, Underscore), C#, ASP.NET MVC, CSS(Bootstrap), HTML, JAVA, Python and Ruby(on Rails), C/C++/, ABAP, Android, Assembler
Tools	Adobe After Effects & Photoshop, Axure, Balsamiq

interests

Personal: I played football in a team for about ten years when growing up and still follow football in general excessively. Other than that, I like cycling, hiking, being outside and enjoying nature or reading different kinds of literature.

Professional: Over the years that I have worked, I have developed an interest for prototyping itself as well as creating and shaping user experience. This is also the main reason I moved to Sweden, to study human-computer interaction and social media.

profile

I am open minded. I have the ability to quickly adapt to changing situations. I am able to identify and troubleshoot issues. I have experience in working in multicultural teams and high performance environments. There is still a lot for me to learn, but I like to learn and I am a fast learner. I am a self-starter and try to keep up with state of the art. I consider myself as multi-talented person, being able to get a lot of different things done.
